

Portable floor stand for displays up to 130 kg (286 lbs)  
 Fits displays with VESA sizes up to 1000 x 600 mm  
 For 55-110" Displays subject to VESA pattern and weight limit  
 Height adjustable at time of assembly  
 3" locking wheels  
 Shelves included

The F19 is an exceptionally robust floor stand crafted from cast and extruded aluminum, ensuring outstanding sturdiness. It offers extensive adjustability with tilt and height options. The use of premium materials makes it a perfect fit for applications that demand top-notch performance.

This cart is specifically designed for AV integrators and resellers who prioritize high-quality work and value meticulous fit and finish.

### SWL 130 kg (286 lbs)

The strong frame can support displays weighing up to 130 kilograms.

### 55-110" Displays

The recommended size range is determined by both the display's weight and the dimensions of its mounting holes. Any display weighing less than 130 kg and featuring a VESA pattern of up to 1000 x 600 mm can be accommodated.

### Big Wheels

The cart is equipped with four 3" (75 mm) locking castors that effortlessly glide over bumps, making it easy to pull, even on deep carpet. Unlike many floor stands with only two locking castors, this design offers enhanced stability, especially on slopes.

### Adjustable Height

The VESA assembly on this stand is adjustable, allowing it to slide up and down the column. Once you find the desired height, you can lock it securely in place. If the display is already mounted on the stand, it is recommended to have two people supporting the display while making adjustments.

### Tilt

You can tilt the display 5° upwards and 12° downwards to optimize the viewing angle. This feature is especially beneficial for young children in a classroom setting or to prevent glare from ceiling lights.

### Shelves Included

The cart comes with two shelves: one positioned above the display for a video conference camera and another below the display for laptops or other devices. Both shelves are height adjustable, providing flexible and convenient setup options.

### Cable Management

Complete the job properly; once the display is in place, the cables can be hidden, resulting in a clean and tidy overall appearance.

### D Handles

The cart features a large D-shaped handle on the column, ensuring effortless maneuverability.

### Fast Assembly

We've made sure to design the packaging in a way that minimizes its size, and we've kept the number of parts to a minimum for easy assembly. You'll be up and running in no time!
